

PATCH PANEL SYSTEM

ABSTRACT OF THE DISCLOSURE

A cable management system is provided having a patch panel and a wire manager. The patch panel has a first connectivity interface configured to connect with electronics cables. The wire manager is located proximate the patch panel and has a body with a curved interior contour. The wire manager is oriented in a non-orthogonal relation to the patch panel such that the body of the wire manager extends rearward at a non-orthogonal angle from the first connectivity interface. Wire managers may be mounted on opposite sides of the patch panel and oriented such that the wire managers and patch panels form a C-shape.
